NETCONNECT LYF™

NetConnect LYF
– the missing piece in secure file access

Overview

The continuous expansion of cloud and mobility in our daily lives is gradually pushing organisations to enable cloud-based access to company data.

More often than not, if external data access is difficult or not available at all, employees take matters into their own hands. Typically by signing up for individual consumer-grade cloud-based file storage services. As a result overall data security is jeopardised and data administration becomes a nightmare.

NetConnect LYF resolves this problem by transforming your existing file storage into your own private cloud file storage service - without requiring you to change your current infrastructure. Everything remains in place: your file servers, your infrastructure, your data!

Product Description

NetConnect LYF enables secure and seamless access to your files from any device of choice without changing your existing infrastructure.

It gives you complete control over who accesses and processes your data, a crucial part of today's overall compliance strategy.

Deployed in less than 30 minutes, NetConnect LYF truly is the missing piece in secure file access.

How does it work?

Once the NetConnect LYF virtual server is installed and configured, users can simply access the internal company file server via the NetConnect LYF application.

NetConnect LYF is available through a simple web browser, or via our native iOS and Android mobile applications. With NetConnect LYF, users can browse, preview, download, upload and edit their files from any device, anywhere.

To keep things simple and secure, users connect using their Active Directory credentials and have access to the same files they can access in the office. Data permissions simply carry over from their existing profile.

NETCONNECT LYF™

Benefits

NetConnect LYF enhances business productivity and continuity, some of the benefits include:

- Instant secure mobile and web access to your files

- Complete control over data storage locations

- Integrates with live servers without migration

- Crucial part of any data compliance strategy

- Make files and folders accessible or restricted

- Full monitoring and reporting capabilities

- No need for public cloud, deploy on-premise servers

- Compatible with your current backup and security policies

Features

- Active directory and Azure AD integration
- Browse, download, upload, preview and edit your files from any device
- Compatible with any browser and mobile device (end user)
- Compatible with all Windows file servers, SMBv1 and SMBv2 (backend)
- Available as on premise virtual appliance or cloud appliance (Azure, AWS)
- Full reporting on user activity

What about security?

NetConnect LYF is built on the powerful and secure NetConnect platform, designed to enable and control secure remote access for any organisation.

Active Directory integration ensures only authorised users can access their files and folders. Permissions are simple to manage and adjust if necessary.

NetConnect LYF is self hosted and self managed to ensure only you have control and access to your data. It is a separate secure server in your environment, acting as an air-gap to prevent direct access to your infrastructure from the Internet.

All communications via the NetConnect LYF server are highly encrypted (SHA-256 minimum) to ensure utmost security for your most important asset - data!

Technical specifications

Virtual appliance*

- 1 - CPU
- 4GB RAM
- 40GB hard drive

Supported hypervisors

- VMware ESX
- Microsoft Hyper-V
- Microsoft Azure
- Amazon Web Services
- and more

Supported user devices

- Windows 7 and above
- Mac OSX 10.6 to 10.11
- Android 4 and above
- Linux
- Apple iOS 9 and above
- Chromebook

Supported browsers

- Internet Explorer
- Firefox
- Safari
- Chrome
